The company SCHLEUTER was founded in 1919 by brothers Hubert and Bernhard Schleuter in Bremen. Nowadays, SCHLEUTER is a leading manufacturer for all kinds of labelling solutions. In an age of climate change, climate protection and the careful use of resources, special consideration is given to the topic of "sustainable productions and packaging concepts". The new Linerless technology is particularly thrifty with resources and will also be an important component of sustainable product packaging for us in the future.

Klaus Kampt, President & CEO

We pass the information obtained to our Development and Design department, which implements the customers' technical wishes in close cooperation.

A vision of the future

Sales & Service

SCHLEUTER has been a leading manufacturer of packaging and labelling machinery for 100 years. Special solutions and customized manufacturing runs are our strength.

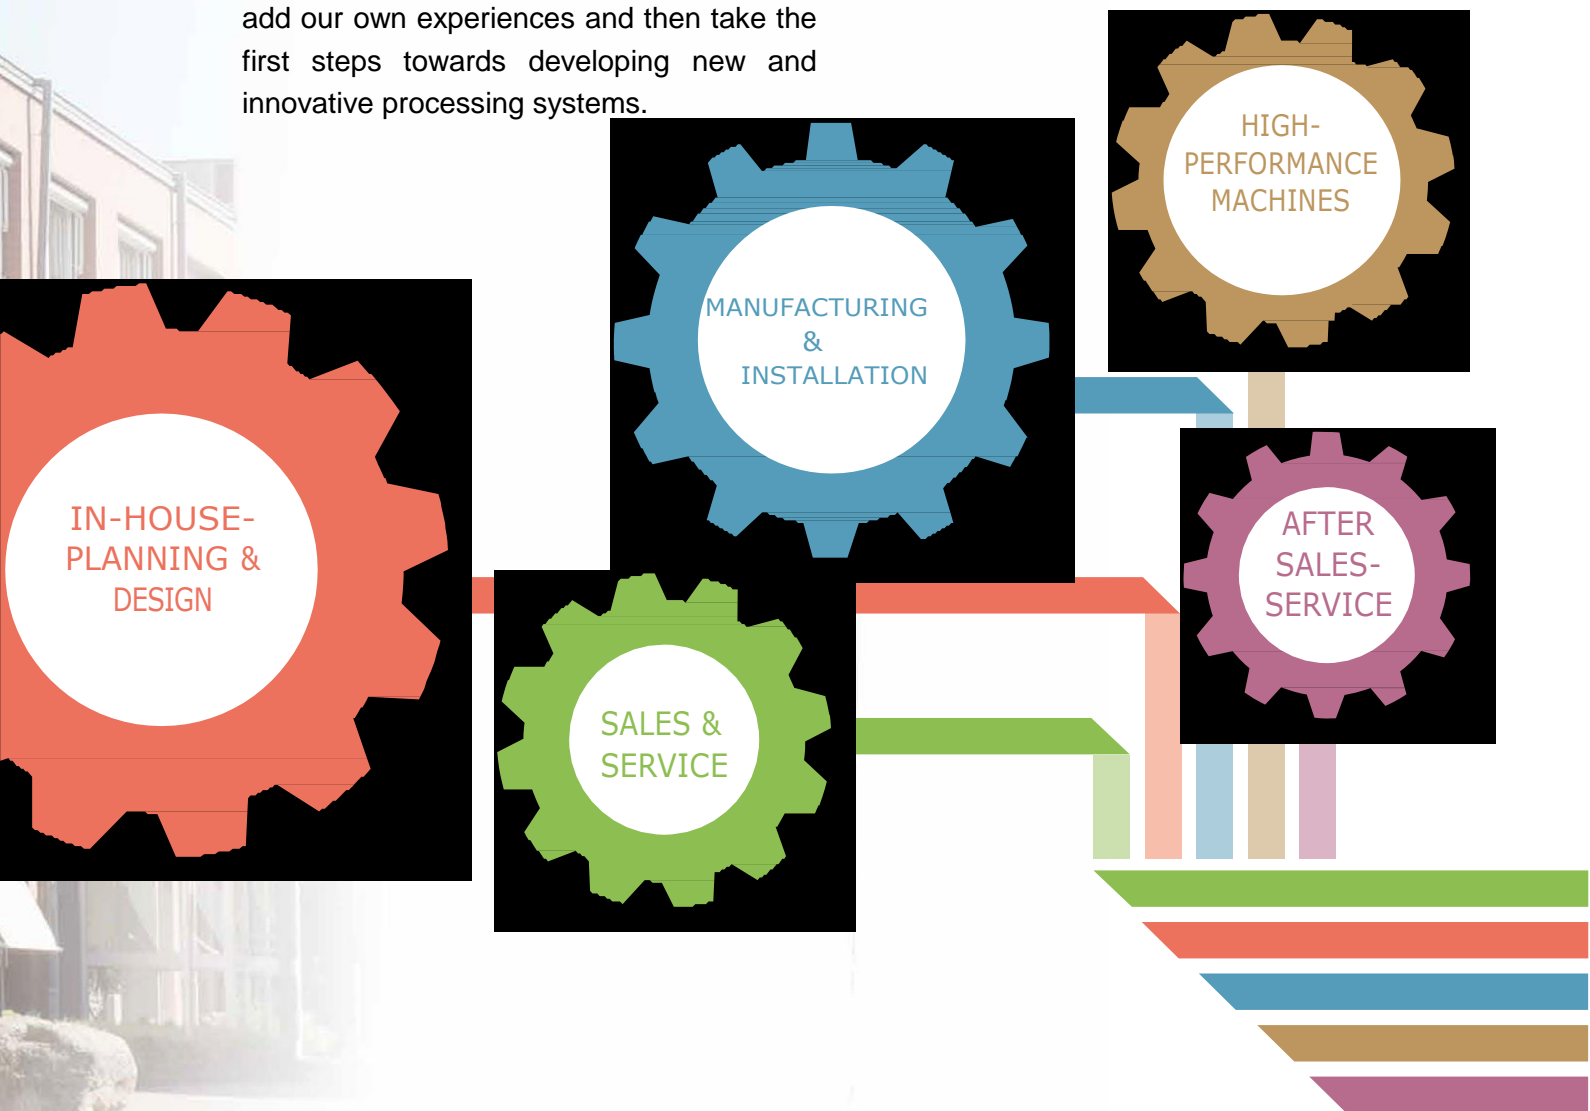

Sales and Customer Service are competent contact partners for our customers. They monitor the market, record trends and developments, and ultimately know what is technically feasible.

We speak with our customers to determine their requirements for their new machine, add our own experiences and then take the first steps towards developing new and innovative processing systems.

The result of this teamwork is machines and systems to suit the market. This is where the almost

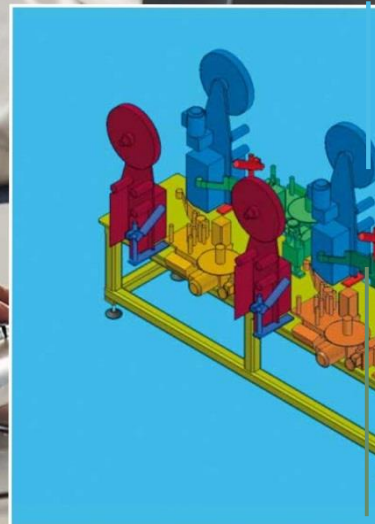

one hundred years of experience in the design and distribution of packaging machines pays off. It is reflected in the high proportions of global exports.

Talk to us if you are looking for an innovative packaging solution. We will help you and take the next steps.

customised solutions

In-HOUSE PLANNING & DESIGN

For many years, our company has relied on 3D technology for designing the machines we make.

In this way, our customers get an excellent spatial impression of their new machine during the initial presentation. Different perspectives and work procedures can be simulated and the machine can be „built“ on site, at least in virtual terms.

At this stage, it shows quite clearly whether we have already met all the conditions or whether minor adjustments are still needed. Precision in the detail is required, as is plenty of experience with the selection and dimensioning of materials.

It is always our first priority to ensure the customer's packaging system achieves a high level of efficiency, regardless of whether it is used for cosmetics, chemicals, pharmaceuticals, plastics or food.

Technical innovations and developments are created in the company's own Design department.

Customers wishes are converted on the computer screen into 3D drawings.

The results are discussed by the team and optionally adapted to the customer's requirements.

SCHLEUTER
MASCHINEN- UND APPARATEBAU

State-of-the-art CNC technology
ensures maximum precision.
Craftsmanship and ability remain essential
for customized solutions.
All production steps are supported by
quality inspections.

Precision on site - all under one roof!

FERTIGUNG & MONTAGE

Our high-efficiency machines are manufactured entirely on our company premises. It is the only way for us to ensure compliance with the highest of quality standards. Using modern CNC-controlled tooling machines, we are able to address the specific wishes and requirements of our customers with flexibility and great precision. Since we operate independently of external suppliers, we are able to react quickly and reliably in order to meet scheduled delivery deadlines, even when working at high capacity.

Contract manufacturing is also a fixed element of our portfolio.

The electronic control unit is the heart of any machine. Our in-house Electrical Engineering department develops and assembles complex systems that continue to work reliably even many years later. All with the familiar "SCHLEUTER quality", of course.

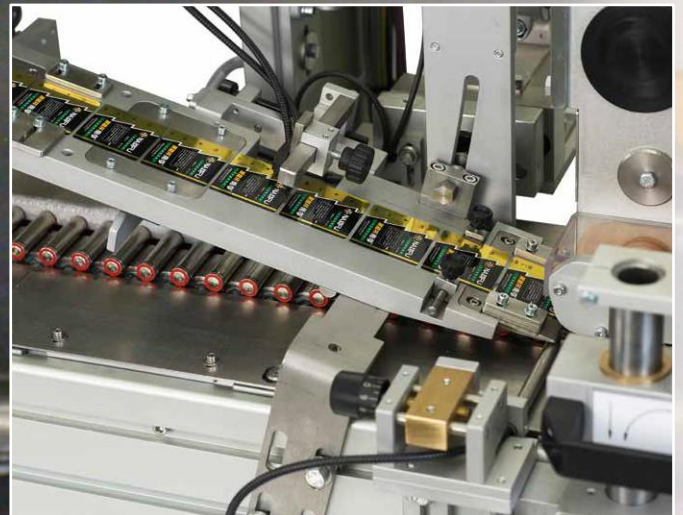

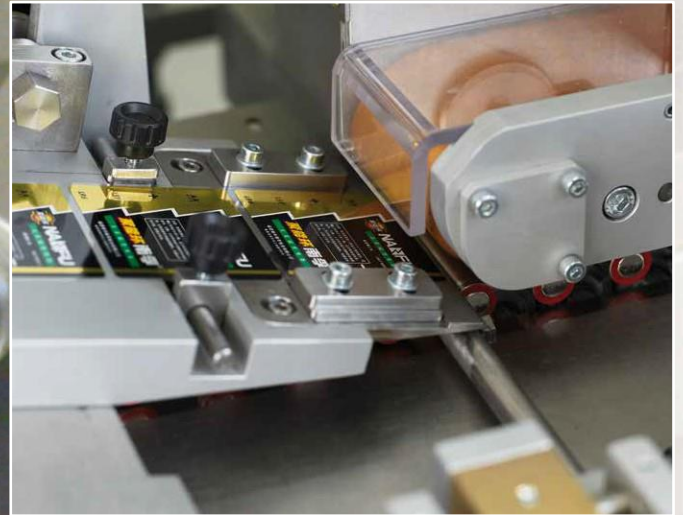

The finished production lines are presented to the customer before dispatch.

Used with success

HIGH-PERFORMANCE MACHINES

Successfully implemented task for the product feed and discharge of machines in our range.

We have been developing and producing labelling and special machines for our customers for decades. These are almost always customized solutions tailored precisely to the problems at hand. Machines in successful operation in Germany and abroad are our best references.

A range of complete solutions for applications in the food industry and for the labelling of animal feed have been implemented, always in conjunction with maximum flexibility, high performance, dependability and process reliability.

Our high-efficiency machines are almost always integrated in complete production lines and are put to work for our customers around the clock with maximum precision and durability.

We keep in touch

AFTER SALES-SERVICE

Watch our video documentary on the successful conclusion of the tex production using Linerless labelling at EVONIK STOKO.

Whether during the design and manufacturing process or once all the work is complete: We are there for you as a service partner.

We are your production partner you can depend on throughout the service life of your SCHLEUTER machine.

We are there for you 365 days a year!

OUR SERVICE:

- Maintenance and servicing
- Spare parts supply
- Repair services
- Production support
- Training of your staff & technicians
- Conversions and modifications
- Advice on process optimisation
- Zweckform- & Steinbeis servicing
- UNICLEAN W- cleaning agent

AFTER SALES-SERVICE

Adolf Müller GmbH & Co.KG, with registered office in Scheeßel, has been a reliable partner for the development, design construction, maintenance and servicing of innovative cutting and winding machines for over 100 years. The highly flexible

and high-performance machines are found in almost all areas of industry, where they are used in numerous applications in particular for the processing of paper, plastic and aluminium.

Success is a tradition!

OUR PARTNER IS CLOSE

Our design engineers, application engineers and electricians use the technologies developed at Müller to achieve optimal processes in conjunction with the greatest possible economic efficiency and profitability in the companies of our customers.

The development of innovative composite materials and the use of products that save on resources has increased hugely in recent years. Müller engineers are requested daily to support customers in Germany and abroad with the development of new production methods in this area.
