2. Information for your safety

We are pleased that you have decided for a high-class KIESELMANN product. With correct application and adequate maintenance, our products provide long time and reliable operation.

Before installation and initiation, please carefully read this instruction manual and the security advices contained in it. This guarantees reliable and safe operation of this product and your plant respectively. Please note that an incorrect application of the process components may lead to great material damages and personal injury.

In case of damages caused by non observance of this instruction manual, incorrect initiation, handling or external interference, the warranty will lapse!

Our products are produced, mounted and tested with high diligence. However, if there is still a reason for complaint, we will naturally try to give you entire satisfaction within the scope of our warranty. We will be at your disposal also after expiration of the warranty. In addition, you will also find all necessary instructions and spare part data for maintenance in this instruction manual. If you don't want to carry out the maintenance by yourself, our KIESELMANN service team will naturally be at your disposal.

3. Marking of security instructions in the operating manual

Hints are available in the chapter "safety instructions" or directly before the respective operation instruction. The hints are highlighted with a danger symbol and a signal word. Texts beside these symbols have to be read and adhered to by all means. Please continue with the text and with the handling at the valve only afterwards.

Symbol	Signal word	Meaning
	DANGER	Imminent danger which may cause severe personal injury or death.
	ATTENTION	Dangerous situation which may cause slight personal injury or material damages.
	NOTE	Marks application hints and other information which is particularly useful.

4. Safety instructions

4.1 Field of application

The Leakage - Butterfly valve is used as a shut-off valve in the food and beverage industry, in pharmaceutical and chemical engineering, as well as in bio-engineering.

ATTENTION

- To avoid danger and damage, the fitting must be used in accordance with the safety instructions and technical data contained in the operating instructions.

4.2 General safety instructions

DANGER

- Dismantling the valve or valve assemblies from the plant can cause injuries from fluids or gases flowing out.
Dismantle the valve or valve assembly only when the plant has been rendered pressure-less and free of liquid and gas.
- Liquids flowing through the leakage drain outlet are to be drained off without splashing into a discharge arrangement.
Before starting the system, the entire pipeline system must be thoroughly cleaned

4.3 General notes

NOTE

- Impurities can cause damage to the seals. Clean inside areas prior to assembly.

5. Function

5.1 Functional description

The valve will be opened and closed due to a rotation of 90°. The switch position is locked in the stop position manually. When closed, the butterfly valve with a tandem seal ensures that different media remain separated without leaking. In closed position alignment of the handle is 90°, in opened position alignment of the handle is parallel to the tube axis. The medium flows depressurised through the leakage drain ring-groove and out the leakage drain outlet. For hygienically demanding products, we recommend cleaning the leakage drain area. (Cleaning connection R1/4").

6. Installation informations

6.1 Installations instructions

Fitting position

Horizontal ► Leakage drain outlet below

Vertical ► Leakage drain outlet generally horizontally

Origin of liquids coming out from the leakage drain outlet

1. A small amount of liquid

⇒ part of the design when the valve is opening and closing

2. Liquid continuously leaking when valve is closed

⇒ seal is damaged (replace the seal)

3. Cleaning agent

⇒ cleaning the leakage drain area

6.2 Welding guidelines

Sealing elements integrated in weld components must generally be removed prior to welding.

To prevent damage, welding should be undertaken by certified personnel (EN287). Use the TIG (Tungsten Inert Gas) welding process.

NOTE

- Impurities can cause damage to the seals and seals area. Clean inside areas prior to assembly.

7. Maintenance

7.1 Maintenance

The maintenance intervals depend on the operating conditions "temperature, temperature-intervals, medium, cleaning medium, pressure and opening frequency". It is recommended to change the leakage butterfly valve-seal annually. The maintenance intervals, however, depend on the condition of the seals and are to be fixed by the user.

NOTE

Seal materials

EPDM; Viton; K-Flex
NBR; HNBR; Silicone
Thread

Lubricants

Klüber Paraliq GTE
Klüber Paraliq GB 363
Teflon grease Interflon

7.2 Cleaning

For best cleaning results, keep the valve open during cleaning to completely rinse the gasket and the valve head.

7.3 Dry running

The butterfly valves should not be operated in dry-run mode for lengthy periods wherever this can be avoided, as this will lead to increased wear.

8. Control system - and interrogation system

8.1 Retrofitting for limit position feedback

By replacing the hand lever and the catch disc the valve can be retrofitted for limit position feedback (proximity switch).

8.2 Conversion to pneumatic actuation

By a simple retrofitting operation the valve can be converted to pneumatic actuation. The rotary actuator for this purpose is supplied complete with fitting device. The following actuators are available, depending on the desired actuating function:

DN 50 - 80	DN 100 - 125	Actuator	Retrofit kit Art.-no.	Function

10. Disassembly and assembly

10.1 Disassembly

➤ Lubricants

- EPDM; Viton; K-Flex
Klüber Paralip GTE 703
- NBR; HNBR; Silikon
Klüber Paralip GB 363

• Thread
Teflongrease Interflon

- Unscrew the saucer-head screw (10) and take off the hand lever (9).
- Unscrew the screws (11) together with the lock washer (12).
- Remove the housing lower part (1).
- Develop the seal (4) with the flap (5).
- Position the flap (5) in "open" position toward the seal (4).
- Clamp the flap clamp (5) at the square into a vice.
- Deform the seal (4) manually to oval shape toward center of flap (5).
- Take the flap (5) at first with the short shaft end and then with the long shaft end out from the bore-holes of the seal (4).

10.2 Assembly

- Thouroughly clean and slightly lubricate mounting areas and running surfaces.
- Assemble in reverse order.

NOTE

- Grease the two shafts of the flap (5) before inserting it into the seal (4) using a grease that is suitable for foods.
- When mounting the hand lever (9), be sure the lever orientation is matched up with the position slot at the square shaft. In this way the correct indication of the valve position by the hand lever is ensured.
